Project Atlas Brief

Summary

This brief is a fictional DEMO document prepared for FolioVerse tests.
Under the base scenario, the market for assisted research tools grows at a compound annual rate of 14.2% between 2026 and 2030.
Regulated industries lead demand because they must document how conclusions were reached.

Upside scenario

The upside case reaches 19% annual growth if enterprise procurement shortens to under six months.
Analysts describe the upside case as plausible but not probable.

Risks

Pricing pressure

Bundled office suites are the main pricing risk for standalone research tools.
Vendors that rely on per-seat pricing face the strongest discount pressure.

Procurement

Growth above 12% per year is unlikely while procurement cycles exceed nine months.
Data-residency reviews add roughly eight weeks to public-sector deals.

Method and regions

Survey

The survey covered 412 organisations across three regions in the spring of 2026. Responses were weighted by organisation size and sector.

Regional outlook

EMEA adoption trails North America by about two years.
APAC shows the fastest growth among mid-sized firms, led by logistics companies.
